

BATH FITTER®

ACRYLIC BATH, SHOWER & WALL SYSTEMS

April 23, 2012

To whom it may concern,

Bath Fitter prides itself in being the only company that provides a true one piece acrylic wall system, acrylic bath liners and shower liners. Our ABS wall systems, bath liners and shower bases are individually measured on each job to insure proper fit, then manufactured to meet your specific requirements. In other words, we don't pull something of a shelf in Japan and try to make it fit, we fit you, you don't fit us. This Bath Fitter process truly insures no issues at time of install, when Retro fitting the existing baths, surfaces and/or shower floors.

We are the only company that installs all of our systems in one day, yes one day. No down time or having to relocate residence. We don't use any subcontractors, all of our installers are w-2 Bath Fitter employees that are back ground checked and certified.

Again, Bath Fitter manufactures all of its own products. Our ABS products contain 3 key components: Acrylonitrile (15-30%), Butadiene (5-30%) and Styrene (40-60%). Bath Fitter controls the percentages of each one of these components, and the level of heat applied to bind these components together determining the strength, and shiny impervious surface that it has. Our ABS products have been compared to the strength of a football helmet and the luster of actual ceramic tile.

It would be impossible for any competitor to know the percentages of each component we use at our manufacturing plant, therefore insuring that we are truly a single source company providing one of a kind products and services for over 27 years.

Thank You,

David P. Moya
