

## ***Audio Visual Success Stories***

The **Culinary Institute of America** has renovated their Copia location in Napa, California with the latest Pacific Coast AV technologies. Nestled in the heart of wine country, the institute includes new audio visual innovations for the purposes of culinary instruction and demonstration. The system is fully integrated with ceiling-mounted display monitors, distortion-free microphones, and high resolution pan-tilt-zoom cameras - all controlled from user-friendly touch panels.

**Marshall Medical Center** in Placerville, CA selected Pacific Coast AV for design and integration of a Combinable-Conference Room application. The quad-shaped, audiovisual conference rooms all work independently for huddle meetings with doctors, administrators, and hospital executives. With the added room-combining feature, the meeting participants can retract the dividing walls and join the rooms in various combinations of audiovisual presentations from the operation of intuitive, wall-mounted controllers.

The Emergency Operations Center of **Lawrence Berkeley National Labs** provides a collaboration of multiple security assets, vital communication resources, emergency departments and personnel with the use of a dynamic Video Wall System, designed and installed by Pacific Coast AV. In the event of a major crisis or disaster, the "E.O.C" utilizes workstation computers, video teleconferencing, cable TV systems, and portable media for a versatile and redundant form of emergency resources – all viewed simultaneously on a thin-bezel, 24/7-running video wall.

**Resources Law Group** is a legal services provider specializing in environmental law, conservation initiatives, and natural resources management. Pacific Coast AV has been privileged to provide audiovisual integration services for their Main Conference Room. The system includes laptop connectivity using flip-top cable boxes, video projection, touch panel control, and dual-display monitor video teleconferencing - which saves on travel costs and reflects very well on a firm that advocates for energy efficiency and conservation.
